                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing artificial chromosome by introducing a nucleic acid into plant cell, selecting artificial chromosome that has one or more repeat regions with equivalent amounts of euchromatic and heterochromatic nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for producing plant artificial chromosomes. The invention also relates to methods for targeting insertion of heterologous DNA into plant artificial chromosomes, methods for delivery of plant chromosomes to selected cells and tissues. The isolated plant artificial chromosome (PAC) is useful for producing a transgenic plant, which involves introducing the PAC into a plant cell. The PAC comprises a heterologous nucleic acid encoding a gene product such as enzymes, antisense RNA, tRNA, rDNA, structural proteins, marker proteins, ligands, receptors, ribozymes, therapeutic proteins, and bipharmaceutical proteins, vaccines, blood factors, antigens, hormones, cytokines, growth factors, antibodies, or a product that provides for resistance to diseases, insects, herbicides, or stress in a plant. The proteins incomes in the protein and protein incomes the provides for resistance to diseases, insects, herbicides, or stress in a plant. The protein incomes and provides and protein and plant in the provides and protein and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the provides and plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant in the plant i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a eukaryotic chromosome (I) comprising one or several att sites, where an att site is heterologous to the chromosome, and permits site-directed integration in the presence of lambda-integrase. Also described: (I) a platform artificial chromosome expression system (ACes) (II) comprising several sites that participate in recombinase catalysed recombination; and (2) a method (MI) for introducing a heterologous nucleic acid into a platform artificial chromosome. (I) can be used in gene therapy. (MI) is useful for introducing a heterologous nucleic acid molecule into a platform artificial chromosome, preferably an ACes. (II) is useful for producing a ratificial chromosome, preferably an ACes. (II) is useful for producing a transgenic animal (e.g. a fish, insect, reptile, amphibian, arachnid, or mammal) by introducing (II) by cell fusion, lipid-mediated transfection, crosprojectile bombardment or direct DNA transfer into an embryonic cell, preferably a stem cell or an embryo. (II) comprises a heterologous nucleic acid that encodes a therapeutic product which is useful for making a library of ACes comprising random portions of a genome.                                                                                                                                                                                                                                                          ਨੋ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 palsei. This plasmid was used in the construction of the vector pFP510 which was used to express synthetic spider dragline variants, DP-1A.9 and DP-1B.9. palsei comprises a replication origin active in E. Coli, a selectable genetic marker which is a gene conferring resistance to mapicillin, sites for the restriction endonucleases BamHI and BglII with no essential sequences between them, and a third restriction site for perior pit, located within the selectable marker which produces cohesive ends incompatible with those produced by BamHI and BglII. The polypeptide monomers are variants based on a consensus sequence derived from the fibre forming regions of spider dragdline protein, esp. the natural protein 1 (Spidroin I) from Nephila clavipes. Synthetic analogues of DPI were designed to mimic the repeating consensus sequence of the natural protein and the pattern of variation among individual repeats. DP-1A analogues are composed of a tandemly repeated 101 amino acid monomer which comparises four repeats which differ from the consensus sequence given in AAW06201, according to the pattern (1) (5): (1) the poly-alanine sequence varies in length from 0-7 residues; (2) when the entire poly-

The proteins way be used to produce fibres of high tensile strength and elasticity, suitable for clothing, rope, surgical sutures, biomaterials for implants, plastic reinforcements, films,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4762
                                                                                          The present sequence is that of vector plasmid pJMF3, which includes phage lambda attP and the lac promoter with the first 21 amino acids of lac2—alpha (from plasmid pUC19) fused in-frame to the Vibrio harveyi chitcbiase gene plasmid pUC19) fused in-frame to the Vibrio harveyi chitcbiase gene (see AAB20484). The invention relates to genetic constructs and methods of using a cytoplasmic form of chitcbiase enzyme as a reporter. A claimed reporter gene construct comprises pJMF3. The invention also comprises expression vectors which express the cytoplasmic form of chitcbiase. Methods are provided for: characterizing a promoter; identifying a regulatory atement capable of directing and regulating transcription within a test sequence; detecting a successful transformation; and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactosiales as a reporter gene in that it is not necessary to engineer many host cells to lack reporter activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TITTACAGTATTATGTAGTCTGTTTTTTATGCAAAATCTAATTTAATATTTGATATTTA 120
transcription (e.g. a promoter) comprises providing a construct linked to a nucleic acid encoding a cytoplasmic form of chitobiase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0.9

phage lambda attP and the lac promoter with the first 21 amino acids of lac2-alpha (from plasmid pUC19) fused in-frame to the Vibrio harveyi chitobiase gene (see AAB20484). The invention relates to genetic constructs and methods of using a cytoplasmic form of chitobiase enzyme as a reporter. A claimed reporter gene construct comprises pUMF4. The invention also comprises expression vectors which express the cytoplasmic form of chitobiase. Methods are provided for: characterizing a promoter; identifying a regulatory element capable of directing and regulating transformation, and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactosidase as a reporter gene in that it is not necessary to engineer many host cells to lack reporter activity. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TITIACAGIAITAIGIAGICIGIIITITIAIGCAAAICIAAITIAAIAIAITIGAIAITIA 4922

The present sequence is that of vector plasmid pDYK9, which comprises the Vibrio harveyi chitobiase gene under the control of the Escherichia coli dnaA promoter in plasmid pACYC184. pDXK9 was used to assess the regulation of the dnaA gene using chitobiase as a reporter enzyme. A claimed reporter gene construct comprises pDYK9. The invention relates to enzyme as a reporter. The invention also comprises expression vectors which express the cytoplasmic form of chitobiase which express the cytoplasmic form of chitobiase. Methods are provided for: characterizing a promoter; identifying a regulatory element capable of directing and regulating transformation; and for monitoring the activity of a promoter. Chitobiase has an advantage over beta-galactosidase as a promoter. Chitobiase has an advantage over beta-galactosidase as a reporter gene system in that it is not necessary to engineer many host cells.
                                                                                                                                                                                                                                                                                              Identifying a regulatory element capable of directing or regulating transcription (e.g. a promoter) comprises providing a construct linked to a nucleic acid encoding a cytoplasmic form of chitobiase.
                                                                                                                                                                                                                                                                                                                                                                         Example 1; Page 29-30; 44pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 57,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 78, Sequence 4, A

US-08-410-544-18

Sequence 18, Application US/08410544

Patent No. 5607646

GENERAL INFORMATION:
APPLICANT: Okano, Kazunori
APPLICANT: Ambara, Hideki
ITILE OF INVENTION: POLYNUCLECTIDE CAPTURING TIP AND
ITILE OF INVENTION: POLYNUCLECTIDE PREPARATIVE METHOD AND DETECTION
ITILE OF INVENTION: METHOD USING SAME
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: Antonelli, Terry, Stout & Kraus
STREET: Suite 600, 1919 Pensylvania Ave., NW
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 AATITAATATATTATATTATATCATTITTACGTTTCTCGTTCAGCTTTTTTATACTAAG 60

RESULT 1 A0991774/C LOCUS DEFINITION	AQ991774 T70 bp DNA linear GSS 14-AUG-2000 Rfc02039F Photorhabdus luminescens strain W14 M13 library Photorhabdus luminescens genomic clone PLG02039F, genomic survey sequence.
ACCESSION VERSION KEYWORDS	AQS91774.1 GI:9650368 GSS.
SOURCE ORGANISM	Photorhabdus luminescens Photorhabdus luminescens Bacteria; Proteobacteria; Enterobacteriales; Barterhardariaceae, Dhotorhabdus
REFERENCE AUTHORS	1 (bases 1 to 770) ffrench-Constant, R.H., Waterfield, N., Burland, V., Perna, N.T., Daborn, P.J., Bowen, D. and Blattner, F.R. Agonomic sample sequence of the entomorathogenic harterium
TILLE JOURNAL MEDLINE PUBMED	A genomic sample sequence of the encomparize bacterium Photorhabdus luminescens W14: potential implications for virulence Appl. Environ. Microbiol. 66 (8), 3310-3329 (2000) 20378633 10919786
COMMENT	Contact: ffrench-Constant RH Department of Biology and Biochemistry University of Bath South Building, Bath BA2 7AY, UK Tel: (44) 1225 826621

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2010)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system-384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Musus Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Bulk tissue was collected from a whole adult_individual
from the Tuebingen strain. list strand cDNA was primed with
a Not I - oligo (dT) primer, double-stranded cDNA was
cloned into the Not I and EcoRV sites of pExpress-1.
Library was size-selected for >1 k fragments. A
Individualized version of this library is also available
(NHH_ZGC_7). Library was constructed by Open Biosystems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AGENCOURT 15225252 NIH_ZGC_10 Danio rerio cDNA clone IMAGE:7001739 CF347604

Bulk tissue was collected from a whole adult_individual

from the Tuebingen strain. 1st strand cDNA was primed

a Not I - oligo (dT) primer, double-stranded cDNA was

cloned into the Not I and EcoRV sites of pExpress-1.

Library was size-selected for >1 kb fragments. A

normalized version of this library is also available

(NHH ZGC 7). Library was constructed by Open Blosystems

(Huntsville, AL)."

Bulk tissue was collected from a whole adult individual
from the Tuebingen strain. 1st strand cDNA was primed with
a Not I - oligo(dT) primer, double-stranded cDNA was
cloned into the Not I and EccRV sites of pExpress-1.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: Wesley, Susan V.
APPLICANT: Waterhouse, Peter
APPLICANT: Helliwell, Christopher A.
TITLE OF INVENTION: Method and means for producing efficient silencing constructs
TITLE DE INVENTION: Using recombinational cloning
                                                                                                                                                                                                                                                                                                      APPLICANT: Wesley, Susan V.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Lenstra,R., d'Auriol,L., Andrieu,B., Le Bras,J. and Galibert,F.

Cloning and sequencing of Plasmodium falciparum DNA fragments

containing repetitive regions potentially coding for histidine-rich

proteins: identification of two overlapping reading frames

Biochem. Biophys. Res. Commun. 146 (1), 368-377 (1987)
